

Grandma's Blackmarket Kitchen

Grandma is (finally) retiring! However, we all know that grandma's never reaaaally retire - they keep cooking their awesome food! Thus, grandma has started a new catering 'company' where she believes taxes isn't something she should pay. Grandma offers two menus:

Grandma's Menus

First menu

1. Grandma's 'tarteletter'
2. Grandma's 'Stegt Flæsk m. persillesovs'
3. Grandma's 'citronfromage'

Second menu

1. Grandma's 'redcabbage salad'
2. Grandma's 'Curry Chicken'
3. Grandma's 'rødgrød m. fløde'

However, since grandma is growing old, she has trouble maintaining an overview of her orders, and she could use your help! She is currently dreaming about a Java program that can help her plan cooking and avoid the police!

Grandma's wishes

- 1) *"I'm dreaming of a program where I can insert the total amount of people I am cooking for and how many of them are picky eaters"*
- 2) *"The program needs to tell me when it is the police who are trying to 'bust' me in cheating with taxes. They always order food for 8 people, of which 7 are picky eaters! Furthermore, my youngest grandson has begun ordering food for 4 people; where 7 of them are picky eaters, and I always fall for it! Can you do something about that?"*
- 3) *"Last, the program should vary randomly between choosing one of my two menus for those that are NOT picky. The picky eaters should always have the first menu (If you want to, you are welcome to invent more menus and add them to the program - then I might actually try out some new dishes)"*

4) “And if you really want to help out an old lady like me, please print the necessary information so that I can forward this to the customer. It could be something alike the following:”

```
Grandma: I want to cook the following 10 menus to you:  
7x 1. Grandma's 'Tarteletter' ,  
    2. Grandma's 'Stegte flæsk m. persillesovs',  
    3. Grandma's 'citronfromage'  
3x 1. Grandma's 'red cabbage salad',  
    2. Grandma's 'curry chicken',  
    3. Grandma's 'rødgrød m. fløde'
```

Grandma's hints as an experienced programmer

She was hacking before you went to kindergarden!

- 1) You need to use multiple if-else statements (Remember to print an error message so that the customer knows grandma doesn't want to cook their food)
- 2) Make a separate variable to count the individual menus. Hereafter you can subtract the amount of picky eaters from the total, and then you can use a for-loop for the rest. Here is a piece of code to randomly generate a number

```
// This needs to be at the top of the program  
import java.util.*;  
  
...  
  
// The following can be used in a method to generate a random  
number between 0 and 5; either 0, 1, 2, 3, 4, or 5 (in total  
6 different options):  
int random_number = (new Random()).nextInt(6);
```

Grandma's most extensive requests

You want to be the best grandchild!

- 1) Make more menus!

- 2) Grandma would love to sell the program, so try making `Grandma` a variable so that we can white-label this bad ass program.
- 3) To extend the menus and the random choice of menu, you can examine Java's [switch-statement](#).
- 4) Lastly, Grandma would also love for the program to calculate the prices, and show them to the customer, can you make that happen? (first menu is 110kr per person, and the second one 131kr).
